3.5 best summon monster

The following creatures are listed in official D&D third edition sources as being summonable by the summon monster series of spells. Entries marked † should probably be ignored due to later articles or the D&D 3.5 revision superceding that entry and moving it to another summon monster list, usually higher. Another variant allows casters to acquire any creature by finding a formula the same way a wizard can add new spells to their spellbook. Another variant places no limit on summons known. Later D&D 3.5 books suggest that each new summon added should replace one on the standard list, in order to limit the spell's versatility. The Celestial and Fiendish templates are nearly identical, so swapping one for the other is equal. Planar Handbook suggests that clerics unable to summon fiendish creatures should not be able to swap those summons out on their list, as to later D&D books discourage making summon monster spells too versatile.
